

# CC20Li TRACKED CARRIER

The CC20Li is an innovative tracked platform intended to reduce the need for manual handling by fitting in areas where forklifts and other machinery cannot get. We believe the CC20Li to be a real innovation within the industry working towards minimising risky manual handling operations.

The new design of the CC20Li gives it a greater capacity over the smaller CC12. The low centre of gravity it can be travelled up and down slopes. The CC20Li can be operated one handed via the palm held remote control system giving precise manoeuvrability, from a safe operating position, which complements our range of mini cranes enabling materials to be easily and safely transported to the lifting area. The tracked design reduces ground pressure and enables rough site conditions to be traversed.

## CC20Li TECHNICAL SPECIFICATION

Type	CC20
Unladen weight	470 kg
Capacity	2000 kg
Carrier length	1420 mm
Carrier width	780 mm
Carrier bed length	1260 mm
Carrier bed width	765 mm
Carrier bed height	425 mm
