

CC60Li TRACKED CARRIER

The CC60Li is an innovative tracked platform intended to reduce the need for manual handling by fitting in areas where forklifts and other machinery cannot get. We believe the CC60Li to be a real innovation within the industry working towards minimising risky manual handling operations.

The new design of the CC60Li gives it a greater capacity over the smaller CC20Li The load carrying table is rotatable through 360° making it easy to travel around site and with a low centre of gravity it can be travelled up and down slopes.

The low centre of gravity it can be travelled up and down slopes. The CC60Li can be operated one handed via the palm held remote control system giving precise manoeuvrability, from a safe operating position, which complements our range of mini cranes enabling materials to be easily and safely transported to the lifting area. The tracked design reduces ground pressure and enables rough site conditions to be traversed.

CC60Li TECHNICAL SPECIFICATION

| | |
|---------------------------|--------------------|
| Type | CC60 Li |
| Unladen weight | 1295 kg |
| Capacity | 6000 kg |
| Carrier length | 2000 mm |
| Carrier width | 1600 mm |
| Carrier bed height | 580 mm |
