

CC90 TRACKED CARRIER

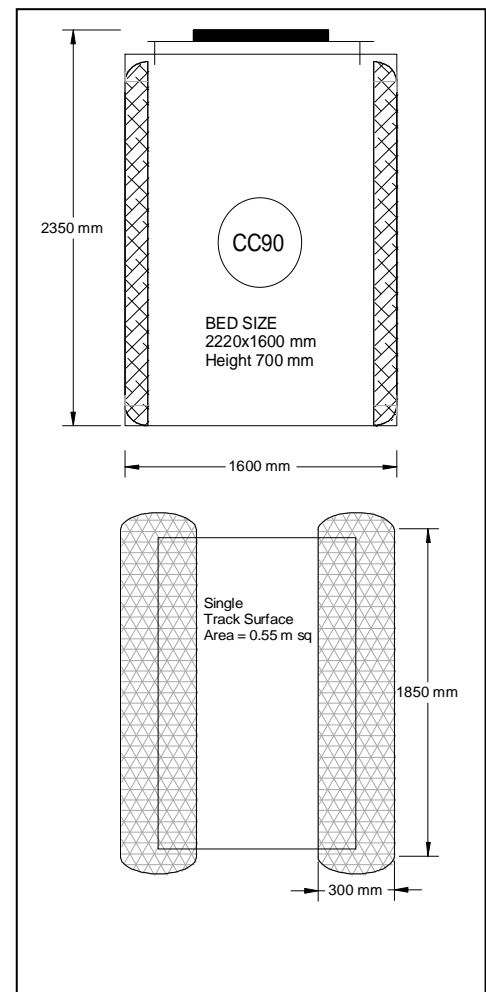

The CC90 is an innovative tracked platform intended to reduce the need for manual handling by fitting in areas where forklifts and other machinery cannot get. We believe the CC90 to be a real innovation within the industry working towards minimising risky manual handling operations.

The new design of the CC90 gives it a greater capacity over the smaller CC20, CC40 and CC60.

The load carrying table is rotatable through 360° making it easy to travel around site and with a low centre of gravity it can be travelled up and down slopes. The CC90 can be operated one handed via the palm held remote control system giving precise manoeuvrability, from a safe operating position, which complements our range of mini cranes enabling materials to be easily and safely transported to the lifting area. The tracked design reduces ground pressure and enables rough site conditions to be traversed.

CC90 TECHNICAL SPECIFICATION

Type	CC90
Unladen weight	1700 kg
Capacity	9000 kg
Carrier length	2200 mm
Carrier width	1600 mm
Carrier bed height	700 mm
